

# Dependencies

In Business Central (BC), dependencies define relationships where one extension or project relies on objects (tables, pages, etc.) from another, declared in app.json (ID, publisher, version), enabling code reuse and modularity.

Business Central Extension 2

App.json

ID

Name

Publisher

Version

Business Central Extension 1

Business Central

Base Application

System application

## Table Extensions

The table extension object allows you to add extra fields or to change some properties on a table provided by Business Central or Dependency app

## Page Extensions

The page extension object extends a Dynamics 365 Business Central page object and adds or overrides the functionality.
