

## Variables in Business central

In Microsoft Dynamics 365 Business Central, variables are named storage locations for data, categorized as user-defined (created by developers in AL code, e.g., myText: Text) or system-defined (built-in by Microsoft, like Rec for current records, xRec for original records, or CurrPage for the active page)

Variables for datatype: var number: Integer;

Variables for Objects: var Employee: Record EmployeeTable;

var arrayOfInteger: array [10] of Integer;

# Scope Of Variables

Local Scope: Variables are accessible within the defined procedure

Global Scope: Variables are accessible within the defined Object

Protected: Variables are accessible from extended objects
