

What are tables?

A table can be visualized as a two-dimensional matrix consisting of columns and rows. A table is a collection of related data that is held in a structured format of columns and rows within a database. Dynamics 365 Business Central provides tables for storing customer information, vendor data, item data, and so on.

Columns

Rows

Employee ID	Employee Name	Employee Age

Employee Table

What are Pages?

Pages are the main way to display and organize visual data in Business Central. They are the primary object that a user will interact with and have a different behavior based on the type that you choose
