

Get Method: The Get method (Record) retrieves one record based on values of the primary key fields.

Primary key

Employee ID	Employee Name	Employee Age	Employee salary
10	Tulsidas	19	20
20	Ramesh	25	0
30	Suresh	0	0
50	Nagesh	50	0

```
var Employee: Record EmployeeTable
```

```
Employee.Get(20);
```

```
Message('Employee name is %1', Employee.Name);
```

```
Employee Name is Ramesh
```

Findlast: Finds the last record in a table based on the current key and filter.

Primary key

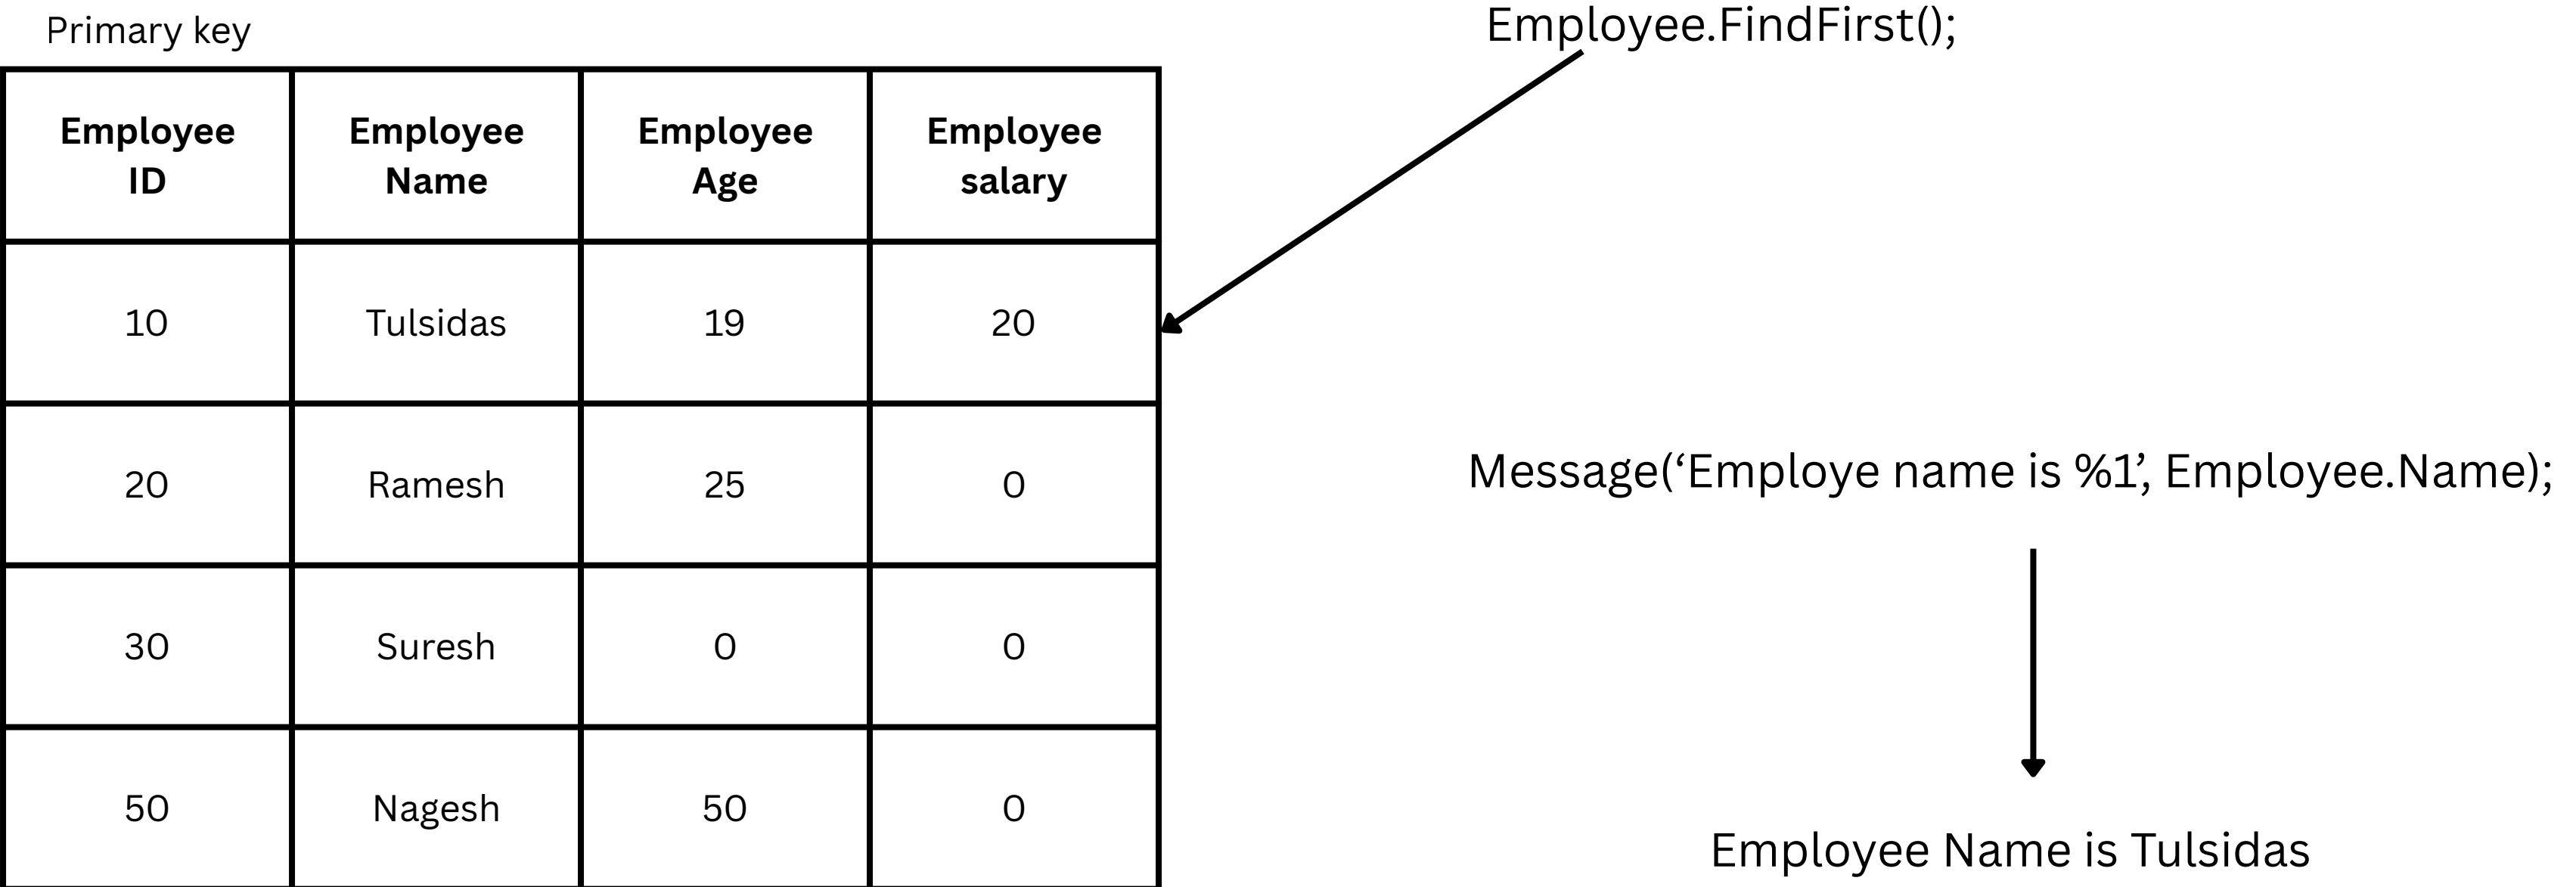

Employee ID	Employee Name	Employee Age	Employee salary
10	Tulsidas	19	20
20	Ramesh	25	0
30	Suresh	0	0
50	Nagesh	50	0

Employee.FindLast();

Message('Employee name is %1', Employee.Name);

Employee Name is Nagesh

Findfirst: Finds the first record in a table based on the current key and filter.

FindSet: Finds the all records in a table based on the current key and filter.

Primary key

Employee ID	Employee Name	Employee Age	Employee salary
10	Tulsidas	19	20
20	Ramesh	25	0
30	Suresh	0	0
50	Nagesh	50	0

Employee.FindSet();

repeat

Message('Employee Name is %1', Employee.name)
until Employee.Next() = 0;
